

First Responder Offshore

Advanced First Responder in accordance with
DGUV Information 203-007

The course teaches participants the job-specific knowledge and skills for assuring advanced first aid measures on offshore wind farms. Building on the DGUV first responder training, this course deals with the challenges involved in the offshore rescue chain and includes job-specific emergency procedures. Qualified paramedic instructors and paramedics provide practical schooling in the special features of medical emergencies in the offshore working environment and also deal with individually available emergency equipment. Advanced first aid measures for a variety of injury patterns are taught intensively in particularly realistic training scenarios.

Teaching Content

- Advanced first aid knowledge
- Capacity to act using standardised algorithms
- Telemedical consultation dependent on the employer's level
- Training in diverse rescue scenarios with high level of practical content
- Strengthening of social competence and ability to act as part of a team

Duration

- Basic
2 days, 20 lessons
- Refresher
1 day, 8 lessons
